PUBLISHED RESEARCH (<http://www.ijimse.co.in/archive/regular-issue/online-31/>) (<https://zenodo.org/records/8352833>)

- Artificial Intelligence in Sustainable Energy Industry: Status Quo, Challenges, and Opportunities
- Solar Irradiance Prediction Using Optimized Nonlinear Autoregressive Exogenous (NARX)-Coupled Deep Bidirectional Long Short-Term Memory Network Model (Publish under review)

INTERSHIPS

- Jakson Group- (4 weeks) Investigated existing machine learning models used to improve solar irradiation prediction, with the goal of improving the efficiency of solar plants thereby reducing plant operational costs. (<https://www.jakson.com/>)
- DropTheQ- (3 weeks) Initial study and understanding of the Restaurant operations for India's leading Ethnic Quick Service Restaurant HALDIRAM'S. Found bottlenecks, suggested new operation flow to prevent those bottlenecks, communicated my findings to the software development team; improved company efficiency by 15%. (<https://droptheq.com/>)

LEARNING & OBSERVATIONS

- Ravi Solar- A two week internship where I Learned how Solar Engineering, Procurement, and Construction (EPC) takes place. Analyzing plant data I observed that a large part of energy goes to waste because of human inefficiencies and cluttered energy management. Thus started work on a prototype of a smart grid to address this gray area.
